

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	28.09.2026
Team ID	SWTID-2026-4440
Project Name	Auto Ticket Classification using FLOW DESIGNER
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Ticket Data Structure & Field Setup	Create School IT Ticket table Add fields: Number (Auto Number), Caller (sys_user), Short Description (String), Description (String) Add Reference fields: Assigned Group (sys_user_group), Assigned to (sys_user)
FR-2	Choice List & Form Design Configuration	Configure Category choices [Network, Hardware, Access, Performance] Configure Subcategory choices [Wi-Fi, Projector, Forgot Password, Slow Computer] Configure State choices [New, In progress, On hold, Resolved, Closed] Save and reload Form Design
FR-3	Automated Flow Designer Trigger & Logic	Trigger flow on Ticket Creation (State = New) Evaluate Short Description, Description, Category, Subcategory Identify issue pattern and route accordingly
FR-4	Automated Group Assignment & Routing	Auto-assign Network issues to Network Support Team Auto-assign Hardware issues to Desktop Support Team Auto-assign Access/Password issues to Service Desk/IAM Auto-assign Performance issues to IT Systems Team
FR-5	Ticket State Transition & Notifications	Update Ticket State from New to In progress automatically upon routing Send automated confirmation email notification to Caller Send assignment alert notification to Assigned Group/Tech
FR-6	Resolution & Closure Management	Update State to Resolved upon issue fix Allow auto-closure after user confirmation or SLA timeout

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
--------	----------------------------	-------------

NFR-1	Usability	Intuitive form layout with clear dropdown choices for Category, Subcategory, and State for end users and IT staff.
NFR-2	Security	Role-based access control (RBAC) ensuring only authorized users and IT personnel can view, assign, or edit ticket fields.
NFR-3	Reliability	Flow Designer automation must accurately classify and route tickets without missed triggers or execution failures.
NFR-4	Performance	Automated classification, field population, and assignment executed within seconds (< 5 seconds) of ticket submission.
NFR-5	Availability	Continuous 24/7 availability of ticket submission portal and automated workflow execution engine.
NFR-6	Scalability	System capable of handling high volume of concurrent ticket submissions across multiple school departments without latency.
