### **Problem – Solution Fit Template:**

Problem–solution fit means identifying a real customer problem and confirming that the proposed solution addresses it effectively. For the Voice Patient Diary Sample Application, the focus is on understanding the difficulties patients, clinicians, and clinical research teams face when recording, managing, and reviewing patient diary information.

### **Purpose:**

- ☐ Solve complex problems in a way that fits the current situation and needs of customers.
- ☐ Increase solution adoption by using familiar ways for patients and healthcare teams to communicate and work.
- ☐ Improve communication and engagement with clear triggers, guidance, and messaging.
- ☐ Increase touch-points with the service by addressing frequent, urgent, or costly diary-reporting problems.

☐ Understand the existing situation so the solution can be improved for the target group.

**Template:**

|                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1. CUSTOMER SEGMENTS (CS)</b><br><br>Patients participating in clinical research; clinicians; clinical researchers; trial coordinators; hospitals and healthcare providers. | <b>2. CUSTOMER CONSTRAINTS (CC)</b><br><br>Patients may find manual diary entry inconvenient, time-consuming, or difficult to complete consistently. Clinical teams may receive incomplete, inconsistent, delayed, or difficult-to-review information. Privacy and secure handling of health-related data are also important constraints. | <b>3. AVAILABLE SOLUTIONS (AS)</b><br><br>Paper diaries, spreadsheets, web forms, phone interviews, manual notes, and general-purpose patient-reporting tools. These approaches may require manual data entry and may not provide an integrated voice, processing, storage, and review workflow. |
| <b>4. JOBS TO BE DONE / PROBLEMS (JP)</b><br><br>Patients need an easy way to record symptoms, experiences, and diary entries. Researchers and                                 | <b>5. PROBLEM MUST-GO</b><br><br>The main problem to remove is the friction and inconsistency caused by manual patient diary reporting, including missed                                                                                                                                                                                  | <b>6. SOLUTION</b><br><br>A voice patient diary application that accepts patient voice input, converts speech to text, applies AI/NLP processing, stores                                                                                                                                         |

|                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>clinicians need accurate, structured, timely information that can be securely stored and reviewed with less manual effort.</p>                                                                                                                            | <p>entries, delayed submissions, transcription effort, and difficulty turning unstructured information into usable clinical-research data.</p>                                                                                                                                                   | <p>information securely, and provides structured access for clinicians and research teams.</p>                                                                                                                                                           |
| <p><b>7. TRIGGERS</b></p> <p>A patient needs to record a symptom or experience; a scheduled diary reminder is received; a clinician or researcher needs an updated entry; or a study team needs more timely and consistent patient-reported information.</p> | <p><b>8. VALUE PROPOSITION</b></p> <p>Make patient diary reporting easier and more accessible while giving clinical teams more timely, organized, and reviewable information. The solution reduces manual entry, supports engagement, and creates a scalable workflow for clinical research.</p> | <p><b>9. CHANNELS &amp; CHAMPIONS</b></p> <p>Mobile or web application access, secure notifications, clinical research organizations, hospitals, healthcare providers, trial coordinators, clinicians, and research teams who advocate for adoption.</p> |
