

Project Design Phase

Proposed Solution Template

Date	28.09.2026
Team ID	SWTID-2026-4440
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Clinical research teams need an efficient and accessible way to collect, manage, and review patient diary information. Traditional manual entry can be time-consuming, inconsistent, and difficult to scale.
2.	Idea / Solution description	A voice patient diary application that allows patients to record diary entries through voice input. The application converts speech to text, applies AI/NLP processing, stores the

		information securely, and provides structured access for clinicians and research teams.
3.	Novelty / Uniqueness	The solution combines voice-based patient input, speech-to-text conversion, AI-assisted processing, secure cloud storage, and a clinician-facing dashboard in one workflow, reducing manual data entry and improving the consistency of collected information.
4.	Social Impact / Customer Satisfaction	The solution can make diary reporting easier and more accessible for patients, improve participation and engagement, reduce reporting effort, and help clinicians and researchers receive more timely and organized information.
5.	Business Model (Revenue Model)	A business-to-business subscription or licensing model for hospitals, clinical research organizations, and healthcare providers, with optional implementation, support, integration, and enterprise service fees.
6.	scalability of the Solution	A modular cloud-based architecture can support increasing numbers of patients, diary entries, organizations, and concurrent requests. Additional storage, processing, and application capacity can be added as usage grows.
